A SUCCESS STORY IN
HAWAII

EDF

In 2008, the State of Hawaii took a significant step forward in addressing its dependence on imported fossil fuels by establishing an ambitious goal: to produce 100% of the state's electricity from renewable energy sources by the year 2045. This bold initiative aims to drastically reduce Hawaii's reliance on nonrenewable resources and promote a cleaner, more sustainable energy future.

EDF Renewables, a subsidiary of the French multinational company Electricité de France (EDF), specializes in the development of renewable energy projects and is playing a crucial role in helping Hawaii achieve its 100% renewable energy generation target. With a diverse portfolio of projects in the state, EDF Renewables has been working diligently to expand Hawaii's renewable energy infrastructure.

Currently, EDF Renewables operates three solar power plants in Hawaii, strategically located to optimize energy production. The first plant is situated in Hilo on the island of Hawaii, the second in Honolulu on the island of O'ahu, and the third in 'Ewa, also on the island of O'ahu. These solar facilities contribute to Hawaii's clean energy production and help to reduce the state's carbon footprint.

Additionally, EDF Renewables has been instrumental in the development of the Hawi wind power plant on Upolo Point, the first utility-scaled wind farm built in the state of Hawaii. This pioneering project further underscores EDF Renewables' commitment to supporting Hawaii's transition towards a sustainable and renewable energy future.
